gathering

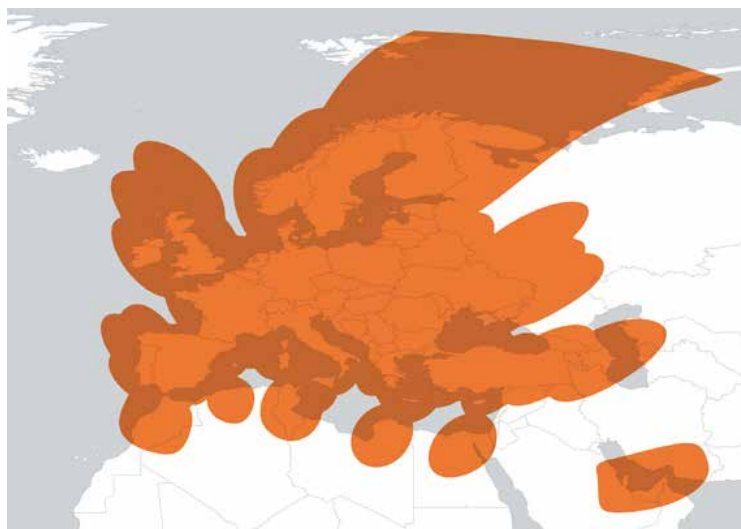

NEWSPOTTER: KA-BAND MOBILE SERVICE DESIGNED FOR MEDIA USERS

Based on Eutelsat's KA-SAT, Newspotter is a unique service, specially designed to fit with broadcasters' needs for mobility and flexibility. The solution is quick and easy to deploy and provide access to high throughput service, ideal for news gathering and rich content transfer from the field.

Media users such as webcasters, press agencies or TV channels can cover news instantly and transfer superior quality files back to their studio or headquarter using Newspotter high speed capabilities up to 10Mbps for download and upload.

But the real plus of Newspotter service is its flexibility: even on short notice users can book capacity on a «per minute» or a «per data» usage basis and be connected to the newsroom in a few minutes.
